

Data & AI Engineer — Data Engineering & Generative AI

EL KHELYFY IMAD

Available from 01/09/2026 | 12- or 24-month apprenticeship | Open to relocation across France | Driving licence B

PROFILE

Currently in a Master's in Data & AI, I build reliable data pipelines and generative-AI applications that hold up in production — from ingestion through to the number that gets reported. At CERIMME, my Python/SQL pipelines cut processing times by 35 % and errors by 40 %; at Renault Group I analyse connected-vehicle usage data (Python, Spotfire, Big Data). Ready to work on your data flows and your LLM use cases from September 2026.

EDUCATION

2025 – present: **Master's in Data & AI**, EILCO, Calais – France
2024 – 2025: **Master 1, Data Science & AI**, Faculty of Sciences, Meknes – Morocco
2023 – 2024: **Bachelor's, Data Science & AI**, Faculty of Sciences, Meknes – Morocco
2021 – 2023: **Higher National Diploma, Computer Systems & Networks**, Lycée Ibn Al-Khatib – Morocco

EXPERIENCE

Data Analyst Intern — Connected-vehicle usage

Renault Group, Aubevoye · June 2026 – Aug. 2026

- **Analysed connected-vehicle** usage data (Python, Big Data) — mission profiling and reliability
- **Structured data quality** control for durability analysis (Data Quality, profiling)
- **Applied statistical inference** to validation plans — sample viability analysis
- **Used Python, Spotfire** and advanced Excel daily for analysis and reporting

Data Analyst / Data Engineer Intern

CERIMME, Casablanca · Aug. 2024 – Sept. 2024

- **Extracted data** through SQL/Python — processing times cut by 35 %
- **Detected anomalies** with Data Quality scripts — errors cut by 40 %
- **Built interactive** Power BI dashboards for activity steering
- **Automated ETL pipelines** and documented the technical processes

IT Support / DevOps Intern

CERIMME, Casablanca · May–June 2023 · Aug.–Sept. 2022

- **Deployed containerised** environments (Git, Docker) — release time cut by 30 %
- **Monitored infrastructure** (Zabbix) and built real-time SQL dashboards

PROJECTS

- **GraphRAG vs Simple RAG:** compared vector search with a structured knowledge graph (Neo4j, LangChain) — context relevance improved through PageRank.
- **GuardianFlow, money-laundering detection:** built an ML financial monitoring system (Scikit-learn, Flask, PostgreSQL, Docker) — 92 % accuracy.
- **Intelligent Event Bot:** built an event-driven content generation pipeline (n8n, Gemini, PostgreSQL) — manual handling cut by 60 %.

SKILLS

- **AI & Data Science:** LangChain, RAG/GraphRAG, LLMs, Gemini AI, Scikit-learn, TensorFlow, NLP, vector embeddings
- **Big Data & Cloud:** Apache Spark, PySpark, Hadoop, Airflow, AWS (S3, Glue, Redshift, Lambda), Databricks
- **Data Engineering:** advanced SQL, PostgreSQL, Neo4j, ETL/ELT, dbt, Medallion architecture, Data Lake
- **Data Visualisation & Reporting:** Power BI (DAX, modelling), Tableau, Spotfire, Streamlit, advanced Excel
- **Software Development:** Python, Java, Spring Boot, FastAPI, Flask, Angular, React.js
- **DevOps:** Git, Docker, CI/CD, Linux, n8n, Zabbix

CERTIFICATIONS & STRENGTHS

- **IBM - Fundamentals of AI Agents Using RAG and** LangChain
- **IBM - Data Engineering:** Pipelines, ETL, Hadoop
- **IBM - Python for Data Science, AI & Development**
- **AWS - Cloud Technical Essentials**
- Rigour
- Autonomy
- Technical curiosity
- Analytical mindset
- Initiative
